Understanding Data Engineer

Manisha Parmar

ServiceNow Engineer | SQL Developer | Data Management & Automation | Former Software & Web Developer | ReactJS

Melbourne, Victoria, Australia

Summary

I am a ServiceNow Engineer with experience in platform engineering, SQL development, automation, data management, and enterprise application development. I enjoy designing solutions that improve business processes, streamline operations, and deliver reliable outcomes for users and stakeholders. My work has involved ServiceNow development, integrations, workflow automation, SnowMirror, SQL Server, PowerShell scripting, and data-focused initiatives that support data quality, governance, and operational efficiency. Throughout my career, I have enjoyed solving complex technical problems and leveraging technology to improve processes. I have a particular interest in data and the way it can be used to drive informed decision-making, improve customer experiences, and create business value. This interest has led me to expand my knowledge of modern data engineering concepts, including data pipelines, ETL/ELT processes, data warehousing, and scalable data solutions. Prior to my current role, I worked across both software and web development. I began my career as a VB 6.0 and SQL Developer, developing desktop applications including ERP solutions, accounting systems for jewellers, doctor appointment management software etc. This experience provided a strong foundation in software development, database design, SQL programming, and translating business requirements into practical technology solutions. I later transitioned into Web Development, working with HTML, CSS, JavaScript, PHP, and WordPress to develop websites and web applications. I also had the opportunity to contribute to a digital experience team at ANZ, supporting customer-facing application journeys for products such as savings accounts and credit cards using ReactJS and Golang. My diverse background across software development, web technologies, enterprise platforms, automation, and data management has given me a broad technical foundation and a continuous appetite for learning. I enjoy collaborating with stakeholders, solving challenging problems, and delivering solutions that create meaningful business outcomes. Core Skills - ServiceNow

Engineering & Development - SQL Server & Database Development - Data Management - SnowMirror- PowerShell Automation - JavaScript & ReactJS - HTML, CSS, PHP & WordPress - System Integration & Workflow Automation - Application Development

Experience

ANZ

5 years 1 month

ServiceNow Engineer

February 2023 - Present (3 years 9 months)

- Design, develop, and support ServiceNow solutions to streamline business processes, improve operational efficiency, and enhance user experience.
- Build and maintain workflows, integrations, catalog items, business rules, client scripts, and automation solutions across the ServiceNow platform.
- Delivered SQL-based large-scale data archiving initiative to improve data lifecycle management, support governance requirements, and optimize platform performance and storage costs. Optimized the solution to support reporting, data analysis, data validation, and operational processes.
- Work closely with stakeholders to gather requirements, translate business needs into technical solutions, and deliver enhancements aligned with organizational objectives.
- Lead and contribute to data-focused initiatives including data archiving, data masking, data quality validation, and data governance activities.
- Develop PowerShell scripts and automation solutions to reduce manual effort and improve operational reliability.
- Perform root cause analysis and troubleshooting for production issues, ensuring timely resolution and ongoing platform stability.
- Collaborate with cross-functional teams to deliver scalable, secure, and maintainable solutions within an enterprise environment.
- Support platform upgrades, enhancements, testing, deployment activities, and continuous improvement initiatives.

React Developer

October 2021 - February 2023 (1 year 5 months)

- Contributed to the development and enhancement of customer-facing digital experiences within the Apply team, supporting online application journeys for banking products including savings accounts and credit cards. - Developed

responsive and reusable front-end components using ReactJS, ensuring consistency, accessibility, and a seamless user experience.
- Collaborated closely with designers, developers, product owners, and business stakeholders to deliver customer-focused solutions.
- Worked within Agile delivery teams to implement new features, resolve defects, and continuously improve application performance. Integrated front-end components with backend services and APIs to support end-to-end customer journeys.
- Assisted in testing, debugging, and optimizing applications to ensure reliability and cross-browser compatibility.
- Contributed to code reviews and maintained coding standards to improve code quality and maintainability. Gained exposure to modern development practices including CI/CD pipelines, version control, and collaborative software development.

FUJIFILM Business Innovation Australia
Front-End Web Developer
July 2015 - August 2020 (5 years 2 months)
Greater Melbourne Area

- Developed and maintained responsive websites, landing pages, and digital marketing assets using HTML5, CSS3, JavaScript, and WordPress.
- Built and tested responsive email marketing (EDM) templates ensuring compatibility across multiple email clients and devices.
- Performed cross-browser and cross-device testing to ensure consistent user experiences.
- Managed and maintained WordPress websites, including content updates, theme customisation, and ongoing support.
- Worked closely with stakeholders, designers, and marketing teams to deliver engaging digital experiences aligned with business objectives.
- Assisted in identifying and resolving website issues, improving usability and performance.

Anything Net
iOS and Web Developer
January 2014 - June 2015 (1 year 6 months)
Melbourne, Victoria, Australia

- Developed and maintained websites and web applications using WordPress, HTML5, CSS3, JavaScript, PHP, and MySQL.
- Designed and customized WordPress websites and themes to meet client-specific business requirements.

- Built responsive and user-friendly web interfaces, ensuring compatibility across browsers and devices.
- Developed and maintained iOS applications using Swift and Xcode, including backend integration and database connectivity.
- Created and maintained backend functionality using PHP and MySQL to support mobile and web applications.
- Collaborated with clients and stakeholders to gather requirements, provide technical recommendations, and deliver tailored solutions.
- Managed the full software development lifecycle, including design, development, testing, deployment, and ongoing support.
- Performed website maintenance, content updates, troubleshooting, and performance improvements.
- Contributed to the delivery of digital solutions across both web and mobile platforms in fast-paced and client-focused environments.

Appscore
Quality Assurance and Web Developer
February 2014 - May 2014 (4 months)
Melbourne

- Created and executed detailed test cases for mobile applications, ensuring software quality and alignment with business requirements.
- Performed functional testing, defect identification, and validation of software enhancements. Monitored project progress and collaborated with development teams to investigate and resolve issues.
- Developed responsive websites and web pages using HTML5, CSS3, JavaScript, jQuery, and Bootstrap.
- Supported quality assurance activities throughout the software development lifecycle.

Winning International
Web Developer
January 2013 - January 2014 (1 year 1 month)
Melbourne

- Designed, developed, and maintained responsive websites and web applications using HTML5, CSS3, JavaScript, jQuery, and Bootstrap.
- Developed server-side functionality using PHP and the Laravel framework. Created and maintained MySQL database structures, queries, and supporting application logic.
- Performed website maintenance, content updates, performance improvements, and bug fixes.

- Worked across both front-end and back-end technologies to deliver effective web solutions.

Ganesh Infotech
Software Developer
May 2005 - July 2008 (3 years 3 months)
Nadiad, Gujarat, India

- Developed and maintained desktop applications using Visual Basic 6.0 and Microsoft SQL Server. Designed and implemented database schemas, stored procedures, queries, and reporting solutions.
- Contributed to the development of ERP modules supporting core business operations. Developed accounting software solutions for Jewelry businesses, including customer, inventory, and financial management functionality. Built doctor appointment management systems to support scheduling, patient records, and administrative processes.
- Collaborated with business users to gather requirements and deliver tailored software solutions. Performed application testing, maintenance, troubleshooting, and ongoing enhancements.

Education

Federation University Australia
Master of Information Technology, Software Engineering · (2011 - 2013)

Gujarat University
Bachelor of Computer Engineering · (2000 - 2004)
